Project

House Manager – Find Your Perfect Stay and Ideal Roommate Live

A web application designed for young professionals and students to streamline finding verified housing accommodations and compatible roommates.

- **Developed user authentication systems** including dynamic user login, logout, and account registration processes with role-based validation.
- **Enabled User and Admin Roles** allowing guests to browse homes and submit application requests, while empowering admins to add, edit, and manage house listings through a centralized dashboard.
- **Maintained platform security and data integrity** by implementing admin authorization middleware to seamlessly review, approve, or decline user-submitted roommate search posts.

Technologies: Python, React, PostgreSQL,JWT, Tailwind CSS, React Hot Toast
